

# GL/GL-3

The HETRONIC GL family of transmitters sets the standard for today's industrial radio remote controls. The GL & GL-3 impresses with its sturdy but attractive design. No compromises are made in regards of functionality and operator friendliness.

## Typical Applications:

Like most Hetric products, the GL transmitter is designed to fit a broad variety of applications. It's ideal for loader cranes, tower cranes, overhead cranes, concrete pumps and other mobile equipment.

The GL is available with up to three dual axis joysticks (digital or proportional) or with up to six fully proportional paddle levers. It comes standard with a battery charger and two rechargeable batteries.

HETRONIC offers the GL pre-engineered and "off-the-shelf" for the most common applications. However, the GL is also available as a customized solution. Please contact HETRONIC and our engineering staff will tailor a GL system to your needs.

The ergonomic and lightweight design allows operators to easily access control elements. The joysticks or paddle levers permit a smooth operation of the machine without operator fatigue.

The GL, in combination with HETRONIC's BMS-2 or modular-design receivers assures effortless integration of the machine circuitry.
