

NOVA-M

The HETRONIC NOVA family of transmitters sets the standard for today's industrial radio remote controls. The small and sturdy design of the NOVA-M is sized just right to allow operations with gloves. No compromises are made in regard to functionality and operator friendliness.

Typical Applications:

Like most Hetric products, the NOVA-M transmitter is designed to fit a broad variety of applications. It's ideal for scissor lifts, tow trucks, tower cranes, overhead cranes and other equipment.

The NOVA-M is available with either two dual axis joysticks (digital or proportional) or with one dual axis joystick (digital or proportional) along with auxiliary functions. It comes standard with a battery charger and two rechargeable batteries.

Hetric offers the NOVA-M pre-engineered and "off-the-shelf" for the most common applications. However, the NOVA-M is also available as a customized solution. Please contact Hetric and our engineering staff will tailor a NOVA-M system to your needs.

The ergonomic and lightweight design allows operators to easily access control elements. The joysticks or paddle levers permit a smooth operation of the machine without operator fatigue.

The NOVA-M in combination with Hetric's RX 14 HL Series or BMS-2 receivers assures effortless integration of the machine circuitry.
