

NOVA-S

The HETRONIC **NOVA** family of transmitters sets the standard for today's industrial radio remote controls. The **NOVA-S** was designed for applications that require a limited amount of digital functions. The belt clip and slim design assure that the **NOVA-S** does not restrict the operator's movements.

Typical Applications:

*Like most Hetric products, the **NOVA-S** transmitter is designed to fit a broad variety of applications. It's ideal for forestry applications, stationary concrete pumps, directional drills and many other types of equipment.*

The **NOVA-S** is available with either toggle switches or push buttons. The housing's design prevents accidental operation while the transmitter is attached to the belt of the operator.

The **NOVA-S** comes standard with a battery charger and two rechargeable batteries.

HETRONIC offers the **NOVA-S** pre-engineered and "off-the-shelf" for most common applications. However, the **NOVA-S** is also available as a customized solution. Please contact Hetric and our engineering staff will tailor a **NOVA-S** system to your needs.

The **NOVA-S** is a favorite among operators in the forestry and concrete pump market. Its slim and lightweight design allows for easy access to the controllers.

The **NOVA-S** in combination with a Hetric's receiver assures effortless integration of the machine circuitry.

OEM version for mortar pump

OEM version for logging machine

Standard Nova-S with matching receiver

OEM version with docking station and battery charger

About Hetric:

HETRONIC is specialized in safety radio remote controls. Our four manufacturing facilities and our sales representatives in over 45 countries provide maximum knowledge and support for our customers. We're confident that our innovative products will increase the safety and efficiency of your machines.
