

Pocket MFSHL

- Lightweight & Sturdy
- Competitively Priced
- Fully Programmable
- Several Standards

(Actual Size)

Pocket MFSHL

The HETRONIC **POCKET** series was designed to serve the basic function market of professional radio remote controls. It's engineered to control a limited number of digital functions without sacrificing safety and reliability. The **POCKET** offers high reliability, high quality and is competitively priced.

The Design:

All **POCKET** transmitters are powered by 3 AA batteries which allows for up to 500 hours of operation. Its slim but ergonomically designed profile allows for easy single-handed operation. The highly reliable membrane switches are available in single or dual speed. The housing is compact but rugged and several different configuration standards are offered for "off-the-shelf" availability.

Applications:

Like most Hetrionic products, the **POCKET** series fits a broad variety of applications. It's ideal for chain hoists, small overhead cranes, conveyor systems, monorails, hook loaders, concrete mixers, tow trucks, tailgates and many other machinery.

The **POCKET** transmitters are fully compatible with Hetrionic's line of **MFSHL** receivers.

The Technology:

POCKET transmitters are equipped with Hetrionic's latest state-of-the-art technology.

H-Link:

H-Link is an intuitive and user-friendly software that runs on a PocketPC. It provides remote access to the settings and parameters within the radio remote control. Individual settings are accessed and configured using the PocketPC and then uploaded wirelessly, via the Hetrionic H-Link modem to the transmitter or receiver. In short: The configuration of a radio remote can be changed or customized from a distance of up to 20 meters (60 ft).

MFS:

The MFS feature enables up to 20 transmitters to be operated in close proximity while sharing the same frequency. Therefore, operators don't have to worry about frequency management.
